On June 8th, officially marked World Oceans Day, people around the globe will celebrate and draw awareness to the massive body of water that regulates the climate, helps feed millions of people every year, produces oxygen, provides us with important medicines and much more.

For Nevada-based Coral LLC, a supplier of above-sea coral minerals, recognizing the 2015 World Oceans Day theme of Healthy Oceans, Healthy Planet, isn't just a once-a-year thing—it's part of the company's everyday business practice.

The coral mineral company offers a wide array of products, from mineral-based supplements to toothpaste, that are derived from coral that is harvested "above-sea (not in the ocean)," in an eco-friendly manner. All products are available in capsule, powder, liquid, soft gel and chewable form.

Unlike the majority of coral minerals obtained in the ocean and gathered aggressively, often resulting in great harm to living coral reefs, Coral LLC delivers the healthful benefits of coral without damage to reefs or the delicate ocean environment. Further, Coral LLC currently partners with non-profits Ocean Conservancy and Friend of the Sea to help protect the health

of the world's oceans and the marine habitat, respectively.

"On World Ocean's Day and every day, our mission is to offer the highest-quality coral minerals, safe for consumers and the beautiful ocean environment," said Clint DeWitt, founder and president of Coral LLC. "We urge consumers to always make the conscious, Coral LLC choice when it comes to procuring the powerful benefits of coral minerals."

For more information, call (800) 882 9577 or visit www.coralcalcium.com.
